

# HARDY FRAME® SPECIAL MOMENT FRAME DESIGN MANAGER

The interactive, web based HF SMF Design Manager from MiTek® enables you to easily input SMF design parameters then submit to our engineers with the click of a mouse. Custom SMF Designs and job specific installation details have never been so easy.

The new Hardy Frame SMF Design Manager includes three tabs – **Project Design Information**, **Frame Geometry and Frame Loads**.

- As Frame geometry, frame configuration, anchorage connections and wood nailer options are input, image graphics are updated instantly to reflect the selections.
- When live and dead loads are entered; uniform or concentrated, a loading diagram simultaneously reflecting the input is provided.
- The Design Manager can now be used for single or two story Frames, up to 3 bays.

Submittal of the design request provides all project information and data necessary for the MiTek – Hardy Frame engineering department to deliver the most economical design with the best up-to-date Side Plate technology.
